## BUILD A HEALTHY GREEN SPACE.

The Aerator is mounted to the front of the Trackless MT, allowing the operator to keep the implement in their sight at all times. The tine discs swivel with the tractor. This feature allows the operator to steer around obstacles without having to raise the attachment as with conventional, rear-mounted aerators.

With the front-mount design, the operator can lift the Aerator, shift the MT into high range, and move to the next job site without having to trailer the equipment.
