

TOW BEHIND SPREADER

TRACKLESSVEHICLES.COM

BUILT TO TACKLE WINTER'S TOUGHEST CHALLENGES.

The Tow Behind Spreader has a 1 cubic yard capacity. It is hydraulically driven and has an electric actuator to control the spread distance.

The Tow Behind Spreader conserves material by dispersing it evenly in a diamond pattern rather than a solid layer. The delivery roller maintains a 41" spread width; this prevents material waste and turf damage from salt. As a result, reduced labour and material requirements minimize the overall cost of operation.
