

SERIES 7

TRACKLESS VEHICLES FRONT-MOUNT SPREADER & PLOW

The Front-Mount Spreader & Plow is a unique combination of a 5-foot angle plow and sidewalk spreader attached to the front of the Trackless MT. The front spreader drops material in front of the tractor tires and provides additional weight over the front axle resulting in significantly increased traction. When combined with a Rear-Mount Sidewalk Spreader, the tractor can carry different materials in the front and rear of the Trackless MT allowing the operator to be selective with their spread materials. Salt can be applied downtown where merchants do not want sand tracking into their stores and sand can be applied from the second spreader on the remaining residential sidewalks.

General Info

Spread width: 41" (1041mm)

Capacity: 1/3 cubic yard

Plow width: 5' (1524mm)

Drive: Hydraulic, independent from rear spreader

Blade angling: 30° left or right
